

f90_stat: STAT Error Code Module

March 8, 2024

1 Name

f90_stat — Module providing STAT error codes

2 Usage

USE F90_STAT

3 Synopsis

Parameters

STAT_ALREADY_ALLOCATED, STAT_MEMORY_LIMIT_EXCEEDED,
STAT_NO_MEMORY, STAT_NOT_ALLOCATED, STAT_NOT_ASSOCIATED,
STAT_PART_OF_LARGER_OBJECT, STAT_POINTER_UNDEFINED,
STAT_WRONG_COLOUR.

4 Parameter Description

INTEGER,PARAMETER :: STAT_ALREADY_ALLOCATED

An allocatable variable in an **ALLOCATE** statement is already currently allocated.

INTEGER,PARAMETER :: STAT_MEMORY_LIMIT_EXCEEDED

An allocation in an **ALLOCATE** statement requested more memory than the limit in this version of the NAG Fortran compiler.

INTEGER,PARAMETER :: STAT_NO_MEMORY

Insufficient free memory available to satisfy the requested allocation.

INTEGER,PARAMETER :: STAT_NOT_ALLOCATED

An allocatable variable in a **DEALLOCATE** statement is not currently allocated.

INTEGER,PARAMETER :: STAT_NOT_ASSOCIATED

A pointer in a **DEALLOCATE** statement is disassociated.

INTEGER,PARAMETER :: STAT_PART_OF_A_LARGER_OBJECT

A pointer in a DEALLOCATE statement refers to part of a larger object.

```
INTEGER,PARAMETER :: STAT_POINTER_UNDEFINED
```

A pointer in a DEALLOCATE statement is undefined. (This value is never returned to the user program, which is always immediately terminated if the use of an undefined pointer is detected.)

```
INTEGER,PARAMETER :: STAT_WRONG_COLOUR
```

A pointer in a DEALLOCATE statement is associated with a target that was not created by pointer allocation.

5 Example

```
USE f90_stat
REAL,ALLOCATABLE :: big(:,:,:)
INTEGER :: status
ALLOCATE(big(100,1024,1024),STAT=status)
IF (status==STAT_NO_MEMORY) PRINT *,'Out of memory'
```

6 Notes

The source code for this module may be found in the NAG Fortran runtime library directory (usually /usr/local/lib/NAG_Fortran).
