

## NAG Library Function Document

### **nag\_opt\_nlp\_option\_set\_string (e04wfc)**

## 1 Purpose

`nag_opt_nlp_option_set_string` (e04wfc) may be used to supply individual optional arguments to `nag_opt_nlp_solve` (e04wdc). The initialization function `nag_opt_nlp_init` (e04wcc) **must** have been called before calling `nag_opt_nlp_option_set_string` (e04wfc).

## 2 Specification

```
#include <nag.h>
#include <nage04.h>
void nag_opt_nlp_option_set_string (const char *string, Nag_E04State *state,
NagError *fail)
```

## 3 Description

`nag_opt_nlp_option_set_string` (e04wfc) may be used to supply values for optional arguments to `nag_opt_nlp_solve` (e04wdc). It is only necessary to call `nag_opt_nlp_option_set_string` (e04wfc) for those arguments whose values are to be different from their default values. One call to `nag_opt_nlp_option_set_string` (e04wfc) sets one argument value.

Each optional argument is defined by a single character string, consisting of one or more items. The items associated with a given option must be separated by spaces, or equals signs [=]. Alphabetic characters may be upper or lower case. The string

```
Print Level = 1
```

is an example of a string used to set an optional argument. For each option the string contains one or more of the following items:

- a mandatory keyword;
- a phrase that qualifies the keyword;
- a number that specifies an Integer or double value. Such numbers may be up to 16 contiguous characters which can be read using C's d or g formats, terminated by a space if this is not the last item on the line.

For `nag_opt_nlp_option_set_string` (e04wfc), each user-specified option is not normally printed as it is defined, but this printing may be turned on using the keyword **List**. Thus the statement

```
e04wfc ("List", &state, &fail);
```

turns on printing of this and subsequent options. Printing may be turned off again using the keyword **Nolist**.

Optional argument settings are preserved following a call to `nag_opt_nlp_solve` (e04wdc) and so the keyword **Defaults** is provided to allow you to reset all the optional arguments to their default values before a subsequent call to `nag_opt_nlp_solve` (e04wdc).

A complete list of optional arguments, their abbreviations, synonyms and default values is given in Section 12 in `nag_opt_nlp_solve` (e04wdc).

## 4 References

None.

## 5 Arguments

- 1: **string** – const char \* *Input*  
*On entry:* a single valid option string (see Section 3 in nag\_opt\_nlp\_option\_set\_string (e04wfc) and Section 12 in nag\_opt\_nlp\_solve (e04wdc)).
- 2: **state** – Nag\_E04State \* *Communication Structure*  
**state** contains internal information required for functions in this suite. It must not be modified in any way.
- 3: **fail** – NagError \* *Input/Output*  
The NAG error argument (see Section 3.6 in the Essential Introduction).

## 6 Error Indicators and Warnings

### NE\_BAD\_PARAM

On entry, argument  $\langle value \rangle$  had an illegal value.

### NE\_E04\_OPTION\_INVALID

The supplied option is invalid. Check that the keywords are neither ambiguous nor misspelt. The option string is ‘ $\langle value \rangle$ ’.

### NE\_E04WCC\_NOT\_INIT

Initialization function nag\_opt\_nlp\_init (e04wcc) has not been called.

### NE\_INTERNAL\_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please contact NAG for assistance.

## 7 Accuracy

Not applicable.

## 8 Parallelism and Performance

Not applicable.

## 9 Further Comments

nag\_opt\_nlp\_option\_set\_file (e04wec), nag\_opt\_nlp\_option\_set\_integer (e04wgc) or nag\_opt\_nlp\_option\_set\_double (e04whc) may also be used to supply optional arguments to nag\_opt\_nlp\_solve (e04wdc).

## 10 Example

See Section 10 in nag\_opt\_nlp\_option\_set\_file (e04wec).
