

NAG Library Function Document

nag_dtrsm (f16yjc)

1 Purpose

nag_dtrsm (f16yjc) solves a system of equations given as a real triangular matrix with multiple right-hand sides.

2 Specification

```
#include <nag.h>
#include <nagf16.h>

void nag_dtrsm (Nag_OrderType order, Nag_SideType side, Nag_UploType uplo,
               Nag_TransType trans, Nag_DiagType diag, Integer m, Integer n,
               double alpha, const double a[], Integer pda, double b[], Integer pdb,
               NagError *fail)
```

3 Description

nag_dtrsm (f16yjc) performs one of the matrix-matrix operations

$$\begin{array}{l} B \leftarrow \alpha A^{-1} B, \quad B \leftarrow \alpha A^{-T} B, \\ B \leftarrow \alpha B A^{-1} \quad \text{or} \quad B \leftarrow \alpha B A^{-T}, \end{array}$$

where A is a real triangular matrix, B is an m by n real matrix, and α is a real scalar. A^{-T} denotes A^{-T} or equivalently A^{-T} .

5 Arguments

- 1: **order** – Nag_OrderType *Input*
- On entry:* the **order** argument specifies the two-dimensional storage scheme being used, i.e., row-major ordering or column-major ordering. C language defined storage is specified by **order** = Nag_RowMajor. See Section 3.2.1.3 in the Essential Introduction for a more detailed explanation of the use of this argument.
- Constraint:* **order** = Nag_RowMajor or Nag_ColMajor.
- 2: **side** – Nag_SideType *Input*
- On entry:* specifies whether B is operated on from the left or the right.
- side** = Nag_LeftSide
 B is pre-multiplied from the left.
- side** = Nag_RightSide
 B is post-multiplied from the right.
- Constraint:* **side** = Nag_LeftSide or Nag_RightSide.

- 3: **uplo** – Nag_UploType *Input*
On entry: specifies whether A is upper or lower triangular.
uplo = Nag_Upper
 A is upper triangular.
uplo = Nag_Lower
 A is lower triangular.
Constraint: **uplo** = Nag_Upper or Nag_Lower.
- 4: **trans** – Nag_TransType *Input*
On entry: specifies the operation to be performed.
trans = Nag_Trans or Nag_ConjTrans and **side** = Nag_LeftSide
 $B \leftarrow \alpha A^{-T} B$.
trans = Nag_NoTrans and **side** = Nag_LeftSide
 $B \leftarrow \alpha A^{-1} B$.
trans = Nag_Trans or Nag_ConjTrans and **side** = Nag_RightSide
 $B \leftarrow \alpha B A^{-T}$.
trans = Nag_NoTrans and **side** = Nag_RightSide
 $B \leftarrow \alpha B A^{-1}$.
Constraint: **trans** = Nag_NoTrans, Nag_Trans or Nag_ConjTrans.
- 5: **diag** – Nag_DiagType *Input*
On entry: specifies whether A has nonunit or unit diagonal elements.
diag = Nag_NonUnitDiag
The diagonal elements are stored explicitly.
diag = Nag_UnitDiag
The diagonal elements are assumed to be 1 and are not referenced.
Constraint: **diag** = Nag_NonUnitDiag or Nag_UnitDiag.
- 6: **m** – Integer *Input*
On entry: m , the number of rows of the matrix B ; the order of A if **side** = Nag_LeftSide.
Constraint: $m \geq 0$.
- 7: **n** – Integer *Input*
On entry: n , the number of columns of the matrix B ; the order of A if **side** = Nag_RightSide.
Constraint: $n \geq 0$.
- 8: **alpha** – double *Input*
On entry: the scalar α .
- 9: **a**[*dim*] – const double *Input*
Note: the dimension, *dim*, of the array **a** must be at least
 $\max(1, \mathbf{pda} \times \mathbf{m})$ when **side** = Nag_LeftSide;
 $\max(1, \mathbf{pda} \times \mathbf{n})$ when **side** = Nag_RightSide.
On entry: the triangular matrix A ; A is m by m if **side** = Nag_LeftSide, or n by n if **side** = Nag_RightSide.
If **order** = 'Nag-ColMajor', A_{ij} is stored in **a**[($j - 1$) \times **pda** + $i - 1$].

If **order** = 'Nag_RowMajor', A_{ij} is stored in $\mathbf{a}[(i-1) \times \mathbf{pda} + j - 1]$.

If **uplo** = 'Nag_Upper', A is upper triangular and the elements of the array corresponding to the lower triangular part of A are not referenced.

If **uplo** = 'Nag_Lower', A is lower triangular and the elements of the array corresponding to the upper triangular part of A are not referenced.

If **diag** = 'Nag_UnitDiag', the diagonal elements of A are assumed to be 1, and are not referenced.

10: **pda** – Integer *Input*

On entry: the stride separating row or column elements (depending on the value of **order**) of the matrix A in the array \mathbf{a} .

Constraints:

if **side** = Nag_LeftSide, $\mathbf{pda} \geq \max(1, \mathbf{m})$;

if **side** = Nag_RightSide, $\mathbf{pda} \geq \max(1, \mathbf{n})$.

11: **b[*dim*]** – double *Input/Output*

Note: the dimension, *dim*, of the array \mathbf{b} must be at least

$\max(1, \mathbf{pdb} \times \mathbf{n})$ when **order** = Nag_ColMajor;

$\max(1, \mathbf{m} \times \mathbf{pdb})$ when **order** = Nag_RowMajor.

If **order** = 'Nag_ColMajor', B_{ij} is stored in $\mathbf{b}[(j-1) \times \mathbf{pdb} + i - 1]$.

If **order** = 'Nag_RowMajor', B_{ij} is stored in $\mathbf{b}[(i-1) \times \mathbf{pdb} + j - 1]$.

On entry: the m by n matrix B .

If **alpha** = 0, \mathbf{b} need not be set.

On exit: the updated matrix B .

12: **pdb** – Integer *Input*

On entry: the stride separating row or column elements (depending on the value of **order**) in the array \mathbf{b} .

Constraints:

if **order** = Nag_ColMajor, $\mathbf{pdb} \geq \max(1, \mathbf{m})$;

if **order** = Nag_RowMajor, $\mathbf{pdb} \geq \max(1, \mathbf{n})$.

13: **fail** – NagError * *Input/Output*

The NAG error argument (see Section 3.6 in the Essential Introduction).

6 Error Indicators and Warnings

NE_ALLOC_FAIL

Dynamic memory allocation failed.

NE_BAD_PARAM

On entry, argument $\langle value \rangle$ had an illegal value.

NE_ENUM_INT_2

On entry, **side** = $\langle value \rangle$, **pda** = $\langle value \rangle$, **m** = $\langle value \rangle$.

Constraint: if **side** = Nag_LeftSide, $\mathbf{pda} \geq \max(1, \mathbf{m})$.

On entry, **side** = $\langle value \rangle$, **pda** = $\langle value \rangle$, **n** = $\langle value \rangle$.

Constraint: if **side** = Nag_RightSide, $\mathbf{pda} \geq \max(1, \mathbf{n})$.

NE_INT

On entry, **m** = $\langle value \rangle$.

Constraint: **m** ≥ 0 .

On entry, **n** = $\langle value \rangle$.

Constraint: **n** ≥ 0 .

NE_INT_2

On entry, **pdb** = $\langle value \rangle$, **m** = $\langle value \rangle$.

Constraint: **pdb** $\geq \max(1, \mathbf{m})$.

On entry, **pdb** = $\langle value \rangle$ and **n** = $\langle value \rangle$.

Constraint: **pdb** $\geq \max(1, \mathbf{n})$.

NE_INTERNAL_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please contact NAG for assistance.

7 Accuracy

The BLAS standard requires accurate implementations which avoid unnecessary over/underflow (see Section 2.7 of Basic Linear Algebra Subprograms Technical (BLAST) Forum (2001)).

8 Parallelism and Performance

nag_dtrsm (f16yjc) is not threaded by NAG in any implementation.

nag_dtrsm (f16yjc) makes calls to BLAS and/or LAPACK routines, which may be threaded within the vendor library used by this implementation. Consult the documentation for the vendor library for further information.

Please consult the Users' Note for your implementation for any additional implementation-specific information.

9 Further Comments

No test for singularity or near-singularity of A is included in nag_dtrsm (f16yjc). Such tests must be performed before calling this function.

10 Example

Premultiply real 4 by 2 matrix B by inverse of lower triangular 4 by 4 matrix A , $B \leftarrow A^{-1}B$ (or solve $AX = B$ and return result in B), where

$$A = \begin{pmatrix} 4.30 & & & \\ -3.96 & -4.87 & & \\ 0.40 & 0.31 & -8.02 & \\ -0.27 & 0.07 & -5.95 & 0.12 \end{pmatrix}$$

and

$$B = \begin{pmatrix} -12.90 & -21.50 \\ 16.75 & 14.93 \\ -17.55 & 6.33 \\ -11.04 & 8.09 \end{pmatrix}.$$
