nag_sin_integral (s13adc)

1 Purpose

nag_sin_integral (s13adc) returns the value of the sine integral

$$\text{Si}(x) = \int_0^x \frac{\sin u}{u} du,$$

2 Specification

```
#include <nag.h>
#include <nags.h>
double nag_sin_integral (double x)
```

3 Description

nag_sin_integral (s13adc) calculates an approximate value for $\text{Si}(x)$.

For $|x| \leq 16.0$ it is based on the Chebyshev expansion

$$\text{Si}(x) = x \sum_{r=0}^l a_r T_r(t), t = 2\left(\frac{x}{16}\right)^2 - 1.$$

For $16 < |x| < x_{\text{hi}}$, where x_{hi} is an implementation-dependent number,

$$\text{Si}(x) = \text{sign}(x) \left\{ \frac{\pi}{2} - \frac{f(x) \cos x}{x} - \frac{g(x) \sin x}{x^2} \right\}$$

where $f(x) = \sum_{r=0}^l f_r T_r(t)$ and $g(x) = \sum_{r=0}^l g_r T_r(t)$, $t = 2\left(\frac{16}{x}\right)^2 - 1$.

For $|x| \geq x_{\text{hi}}$, $\text{Si}(x) = \frac{1}{2}\pi \text{sign } x$ to within ***machine precision***.

5 Arguments

1: x – double	<i>Input</i>
On entry: the argument x of the function.	

6 Error Indicators and Warnings

None.

7 Accuracy

If δ and ϵ are the relative errors in the argument and result, respectively, then in principle

$$|\epsilon| \simeq \left| \frac{\delta \sin x}{\text{Si}(x)} \right|.$$

The equality may hold if δ is greater than the ***machine precision*** (δ due to data errors etc.) but if δ is simply due to round-off in the machine representation, then since the factor relating δ to ϵ is always less than one, the accuracy will be limited by ***machine precision***.

8 Parallelism and Performance

Not applicable.

9 Further Comments

None.

10 Example

This example reads values of the argument x from a file, evaluates the function at each value of x and prints the results.

10.1 Program Text

```
/* nag_sin_integral (s13adc) Example Program.
*
* Copyright 1990 Numerical Algorithms Group.
*
* Mark 1, 1990.
*/
#include <nag.h>
#include <stdio.h>
#include <nag_stlib.h>
#include <nags.h>

int main(void)
{
    Integer exit_status = 0;
    double x, y;

    /* Skip heading in data file */
    scanf("%*[^\n]");
    printf("nag_sin_integral (s13adc) Example Program Results\n");
    printf("      x          y\n");
    while (scanf("%lf", &x) != EOF)
    {
        /* nag_sin_integral (s13adc).
         * Sine integral Si(x)
         */
        y = nag_sin_integral(x);
        printf("%12.3e%12.3e\n", x, y);
    }

    return exit_status;
}
```

10.2 Program Data

```
nag_sin_integral (s13adc) Example Program Data
      0.0
      0.2
      0.4
      0.6
      0.8
      1.0
```

10.3 Program Results

```
nag_sin_integral (s13adc) Example Program Results
      x           y
