

NAG Library Function Document

nag_fft_init_trig (c06gzc)

1 Purpose

nag_fft_init_trig (c06gzc) calculates the trigonometric coefficients required for the computation of discrete Fourier transforms.

2 Specification

```
#include <nag.h>
#include <nagc06.h>
void nag_fft_init_trig (Integer n, double trig[], NagError *fail)
```

3 Description

This is a utility function for use in conjunction with one or more of nag_fft_multiple_real (c06fpc), nag_fft_multiple_hermitian (c06fqc), nag_fft_multiple_complex (c06frc), nag_fft_2d_complex (c06fuc), nag_fft_multiple_sine (c06hac), nag_fft_multiple_cosine (c06hbc), nag_fft_multiple_qtr_sine (c06hcc) and nag_fft_multiple_qtr_cosine (c06hdc). nag_fft_init_trig (c06gzc) initializes the array **trig** with trigonometric coefficients according to the value of **n** and must be called prior to the first call of one of the above listed functions.

4 References

None.

5 Arguments

- | | | |
|----|--|---------------------|
| 1: | n – Integer | <i>Input</i> |
| | <i>On entry:</i> the value of <i>n</i> in the Fourier transform function being called. | |
| | <i>Constraint:</i> $n \geq 1$. | |
| 2: | trig [$2 \times n$] – double | <i>Output</i> |
| | <i>On exit:</i> the trigonometric coefficients are stored in trig . | |
| 3: | fail – NagError * | <i>Input/Output</i> |
| | The NAG error argument (see Section 3.6 in the Essential Introduction). | |

6 Error Indicators and Warnings

NE_INT_ARG_LT

On entry, **n** = $\langle value \rangle$.
 Constraint: $n \geq 1$.

7 Accuracy

Exact.

8 Parallelism and Performance

Not applicable.

9 Further Comments

None.

10 Example

The program reads in 3 real data sequences and prints their discrete Fourier transforms in Hermitian format as calculated by `nag_fft_multiple_real` (c06fpc). A call is made to `nag_fft_init_trig` (c06gzc) to initialize the array `trig` prior to calling `nag_fft_multiple_real` (c06fpc). The transforms are then printed out in full complex form after a call to `nag_multiple_hermitian_to_complex` (c06gsc).
