NAG Library Function Document

nag_dggglm (f08zbc)

1   Purpose

nag_dggglm (f08zbc) solves a real general Gauss–Markov linear (least squares) model problem.

2   Specification

```
#include <nag.h>
#include <nagf08.h>
void nag_dggglm (Nag_OrderType order, Integer m, Integer n, Integer p,
      double a[], Integer pda, double b[], Integer pdb, double d[],
      double x[], double y[], NagError *fail)
```

3   Description

nag_dggglm (f08zbc) solves the real general Gauss–Markov linear model (GLM) problem

$$\underset{x}{\text{minimize}} \|y\|_2 \quad \text{subject to} \quad d = Ax + By$$

where A is an m by n matrix, B is an m by p matrix and d is an m element vector. It is assumed that $n \le m \le n + p$, $\text{rank}(A) = n$ and $\text{rank}(E) = m$, where $E = \begin{pmatrix} A & B \end{pmatrix}$. Under these assumptions, the problem has a unique solution x and a minimal 2-norm solution y, which is obtained using a generalized QR factorization of the matrices A and B.

In particular, if the matrix B is square and nonsingular, then the GLM problem is equivalent to the weighted linear least squares problem

$$\underset{x}{\text{minimize}} \left\| B^{-1}(d - Ax) \right\|_2.$$

5   Arguments

1:     **order** – Nag_OrderType   *Input*

On entry: the **order** argument specifies the two-dimensional storage scheme being used, i.e., row-major ordering or column-major ordering. C language defined storage is specified by **order** = Nag_RowMajor. See Section 2.3.1.3 in How to Use the NAG Library and its Documentation for a more detailed explanation of the use of this argument.

Constraint: **order** = Nag_RowMajor or Nag_ColMajor.

2:     **m** – Integer   *Input*

On entry: m, the number of rows of the matrices A and B.

Constraint: **m** ≥ 0.

3: **n** – Integer *Input*

On entry: n, the number of columns of the matrix A.

Constraint: $0 \le \mathbf{n} \le \mathbf{m}$.

4: **p** – Integer *Input*

On entry: p, the number of columns of the matrix B.

Constraint: $\mathbf{p} \ge \mathbf{m} - \mathbf{n}$.

5: **a**[*dim*] – double *Input/Output*

Note: the dimension, *dim*, of the array **a** must be at least

max$(1, \mathbf{pda} \times \mathbf{n})$ when **order** = Nag_ColMajor;
max$(1, \mathbf{m} \times \mathbf{pda})$ when **order** = Nag_RowMajor.

The (i, j)th element of the matrix A is stored in

$\mathbf{a}[(j - 1) \times \mathbf{pda} + i - 1]$ when **order** = Nag_ColMajor;
$\mathbf{a}[(i - 1) \times \mathbf{pda} + j - 1]$ when **order** = Nag_RowMajor.

On entry: the m by n matrix A.

On exit: **a** is overwritten.

6: **pda** – Integer *Input*

On entry: the stride separating row or column elements (depending on the value of **order**) in the array **a**.

Constraints:

if **order** = Nag_ColMajor, $\mathbf{pda} \ge \max(1, \mathbf{m})$;
if **order** = Nag_RowMajor, $\mathbf{pda} \ge \max(1, \mathbf{n})$.

7: **b**[*dim*] – double *Input/Output*

Note: the dimension, *dim*, of the array **b** must be at least

max$(1, \mathbf{pdb} \times \mathbf{p})$ when **order** = Nag_ColMajor;
max$(1, \mathbf{m} \times \mathbf{pdb})$ when **order** = Nag_RowMajor.

The (i, j)th element of the matrix B is stored in

$\mathbf{b}[(j - 1) \times \mathbf{pdb} + i - 1]$ when **order** = Nag_ColMajor;
$\mathbf{b}[(i - 1) \times \mathbf{pdb} + j - 1]$ when **order** = Nag_RowMajor.

On entry: the m by p matrix B.

On exit: **b** is overwritten.

8: **pdb** – Integer *Input*

On entry: the stride separating row or column elements (depending on the value of **order**) in the array **b**.

Constraints:

if **order** = Nag_ColMajor, $\mathbf{pdb} \ge \max(1, \mathbf{m})$;
if **order** = Nag_RowMajor, $\mathbf{pdb} \ge \max(1, \mathbf{p})$.

9: **d**[**m**] – double *Input/Output*

On entry: the left-hand side vector d of the GLM equation.

On exit: **d** is overwritten.

10:    **x[n]** – double   *Output*

    On exit: the solution vector x of the GLM problem.

11:    **y[p]** – double   *Output*

    On exit: the solution vector y of the GLM problem.

12:    **fail** – NagError *   *Input/Output*

    The NAG error argument (see Section 2.7 in How to Use the NAG Library and its Documentation).

6   Error Indicators and Warnings

NE_ALLOC_FAIL

    Dynamic memory allocation failed.
    See Section 3.2.1.2 in How to Use the NAG Library and its Documentation for further information.

NE_BAD_PARAM

    On entry, argument $\langle value \rangle$ had an illegal value.

NE_INT

    On entry, $\mathbf{m} = \langle value \rangle$.
    Constraint: $\mathbf{m} \geq 0$.

    On entry, $\mathbf{pda} = \langle value \rangle$.
    Constraint: $\mathbf{pda} > 0$.

    On entry, $\mathbf{pdb} = \langle value \rangle$.
    Constraint: $\mathbf{pdb} > 0$.

NE_INT_2

    On entry, $\mathbf{m} = \langle value \rangle$ and $\mathbf{n} = \langle value \rangle$.
    Constraint: $0 \leq \mathbf{n} \leq \mathbf{m}$.

    On entry, $\mathbf{pda} = \langle value \rangle$ and $\mathbf{m} = \langle value \rangle$.
    Constraint: $\mathbf{pda} \geq \max(1, \mathbf{m})$.

    On entry, $\mathbf{pda} = \langle value \rangle$ and $\mathbf{n} = \langle value \rangle$.
    Constraint: $\mathbf{pda} \geq \max(1, \mathbf{n})$.

    On entry, $\mathbf{pdb} = \langle value \rangle$ and $\mathbf{m} = \langle value \rangle$.
    Constraint: $\mathbf{pdb} \geq \max(1, \mathbf{m})$.

    On entry, $\mathbf{pdb} = \langle value \rangle$ and $\mathbf{p} = \langle value \rangle$.
    Constraint: $\mathbf{pdb} \geq \max(1, \mathbf{p})$.

NE_INT_3

    On entry, $\mathbf{p} = \langle value \rangle$, $\mathbf{m} = \langle value \rangle$ and $\mathbf{n} = \langle value \rangle$.
    Constraint: $\mathbf{p} \geq \mathbf{m} - \mathbf{n}$.

NE_INTERNAL_ERROR

    An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please contact NAG for assistance.

    An unexpected error has been triggered by this function. Please contact NAG.
    See Section 3.6.6 in How to Use the NAG Library and its Documentation for further information.

NE_NO_LICENCE

> Your licence key may have expired or may not have been installed correctly.
> See Section 3.6.5 in How to Use the NAG Library and its Documentation for further information.

NE_SINGULAR

> The bottom $(N - M)$ by $(N - M)$ part of the upper trapezoidal factor T associated with B in the generalized QR factorization of the pair (A, B) is singular, so that $\text{rank}\begin{pmatrix} A & B \end{pmatrix} < n$; the least squares solutions could not be computed.

> The $(N - P)$ by $(N - P)$ part of the upper trapezoidal factor T associated with A in the generalized RQ factorization of the pair (B, A) is singular, so that $\text{rank}\begin{pmatrix} B & A \end{pmatrix} < n$; the least squares solutions could not be computed.

7   Accuracy

For an error analysis, see Anderson *et al.* (1992). See also Section 4.6 of Anderson *et al.* (1999).

8   Parallelism and Performance

nag_dggglm (f08zbc) is threaded by NAG for parallel execution in multithreaded implementations of the NAG Library.

nag_dggglm (f08zbc) makes calls to BLAS and/or LAPACK routines, which may be threaded within the vendor library used by this implementation. Consult the documentation for the vendor library for further information.

Please consult the x06 Chapter Introduction for information on how to control and interrogate the OpenMP environment used within this function. Please also consult the Users' Notefor your implementation for any additional implementation-specific information.

9   Further Comments

When $p = m \geq n$, the total number of floating-point operations is approximately $\frac{2}{3}(2m^3 - n^3) + 4nm^2$; when $p = m = n$, the total number of floating-point operations is approximately $\frac{14}{3}m^3$.

10   Example

This example solves the weighted least squares problem

$$\underset{x}{\text{minimize}} \left\| B^{-1}(d - Ax) \right\|_2,$$

where

$$B = \begin{pmatrix} 0.5 & 0.0 & 0.0 & 0.0 \\ 0.0 & 1.0 & 0.0 & 0.0 \\ 0.0 & 0.0 & 2.0 & 0.0 \\ 0.0 & 0.0 & 0.0 & 5.0 \end{pmatrix}, \quad d = \begin{pmatrix} 1.32 \\ -4.00 \\ 5.52 \\ 3.24 \end{pmatrix} \quad \text{and} \quad A = \begin{pmatrix} -0.57 & -1.28 & -0.39 \\ -1.93 & 1.08 & -0.31 \\ 2.30 & 0.24 & -0.40 \\ -0.02 & 1.03 & -1.43 \end{pmatrix}.$$
