

NAG Library Function Document

nag_zhemm (f16zcc)

1 Purpose

nag_zhemm (f16zcc) performs matrix-matrix multiplication for a complex Hermitian matrix.

2 Specification

```
#include <nag.h>
#include <nagf16.h>

void nag_zhemm (Nag_OrderType order, Nag_SideType side, Nag_UptoType uplo,
    Integer m, Integer n, Complex alpha, const Complex a[], Integer pda,
    const Complex b[], Integer pdb, Complex beta, Complex c[], Integer pdc,
    NagError *fail)
```

3 Description

nag_zhemm (f16zcc) performs one of the matrix-matrix operations

$$C \leftarrow \alpha AB + \beta C \quad \text{or} \quad C \leftarrow \alpha BA + \beta C,$$

where A is a complex Hermitian matrix, B and C are m by n complex matrices, and α and β are complex scalars.

5 Arguments

1: **order** – Nag_OrderType *Input*

On entry: the **order** argument specifies the two-dimensional storage scheme being used, i.e., row-major ordering or column-major ordering. C language defined storage is specified by **order** = Nag_RowMajor. See Section 2.3.1.3 in How to Use the NAG Library and its Documentation for a more detailed explanation of the use of this argument.

Constraint: **order** = Nag_RowMajor or Nag_ColMajor.

2: **side** – Nag_SideType *Input*

On entry: specifies whether B is operated on from the left or the right.

side = Nag_LeftSide
 B is pre-multiplied from the left.

side = Nag_RightSide
 B is post-multiplied from the right.

Constraint: **side** = Nag_LeftSide or Nag_RightSide.

3: **uplo** – Nag_Uplotype *Input*

On entry: specifies whether the upper or lower triangular part of A is stored.

uplo = Nag_Upper

The upper triangular part of A is stored.

uplo = Nag_Lower

The lower triangular part of A is stored.

Constraint: **uplo** = Nag_Upper or Nag_Lower.

4: **m** – Integer *Input*

On entry: m , the number of rows of the matrices B and C ; the order of A if **side** = Nag_LeftSide.

Constraint: $m \geq 0$.

5: **n** – Integer *Input*

On entry: n , the number of columns of the matrices B and C ; the order of A if **side** = Nag_RightSide.

Constraint: $n \geq 0$.

6: **alpha** – Complex *Input*

On entry: the scalar α .

7: **a[dim]** – const Complex *Input*

Note: the dimension, dim , of the array **a** must be at least

$\max(1, \mathbf{pda} \times m)$ when **side** = Nag_LeftSide;
 $\max(1, \mathbf{pda} \times n)$ when **side** = Nag_RightSide.

On entry: the Hermitian matrix A ; A is m by m if **side** = Nag_LeftSide, or n by n if **side** = Nag_RightSide.

If **order** = Nag_ColMajor, A_{ij} is stored in $\mathbf{a}[(j-1) \times \mathbf{pda} + i - 1]$.

If **order** = Nag_RowMajor, A_{ij} is stored in $\mathbf{a}[(i-1) \times \mathbf{pda} + j - 1]$.

If **uplo** = Nag_Upper, the upper triangular part of A must be stored and the elements of the array below the diagonal are not referenced.

If **uplo** = Nag_Lower, the lower triangular part of A must be stored and the elements of the array above the diagonal are not referenced.

8: **pda** – Integer *Input*

On entry: the stride separating row or column elements (depending on the value of **order**) of the matrix A in the array **a**.

Constraints:

if **side** = Nag_LeftSide, $\mathbf{pda} \geq \max(1, m)$;
if **side** = Nag_RightSide, $\mathbf{pda} \geq \max(1, n)$.

9: **b[dim]** – const Complex *Input*

Note: the dimension, dim , of the array **b** must be at least

$\max(1, \mathbf{pdb} \times n)$ when **order** = Nag_ColMajor;
 $\max(1, m \times \mathbf{pdb})$ when **order** = Nag_RowMajor.

If **order** = Nag_ColMajor, B_{ij} is stored in $\mathbf{b}[(j-1) \times \mathbf{pdb} + i - 1]$.

If **order** = Nag_RowMajor, B_{ij} is stored in $\mathbf{b}[(i - 1) \times \mathbf{pdb} + j - 1]$.

On entry: the m by n matrix B .

10: **pdb** – Integer *Input*

On entry: the stride separating row or column elements (depending on the value of **order**) in the array **b**.

Constraints:

if **order** = Nag_ColMajor, $\mathbf{pdb} \geq \max(1, \mathbf{m})$;
 if **order** = Nag_RowMajor, $\mathbf{pdb} \geq \max(1, \mathbf{n})$.

11: **beta** – Complex *Input*

On entry: the scalar β .

12: **c[dim]** – Complex *Input/Output*

Note: the dimension, dim , of the array **c** must be at least

$\max(1, \mathbf{pdc} \times \mathbf{n})$ when **order** = Nag_ColMajor;
 $\max(1, \mathbf{m} \times \mathbf{pdc})$ when **order** = Nag_RowMajor.

If **order** = Nag_ColMajor, C_{ij} is stored in $\mathbf{c}[(j - 1) \times \mathbf{pdc} + i - 1]$.

If **order** = Nag_RowMajor, C_{ij} is stored in $\mathbf{c}[(i - 1) \times \mathbf{pdc} + j - 1]$.

On entry: the m by n matrix C .

If **beta** = 0, **c** need not be set.

On exit: the updated matrix C .

13: **pdc** – Integer *Input*

On entry: the stride separating row or column elements (depending on the value of **order**) in the array **c**.

Constraints:

if **order** = Nag_ColMajor, $\mathbf{pdc} \geq \max(1, \mathbf{m})$;
 if **order** = Nag_RowMajor, $\mathbf{pdc} \geq \max(1, \mathbf{n})$.

14: **fail** – NagError * *Input/Output*

The NAG error argument (see Section 2.7 in How to Use the NAG Library and its Documentation).

6 Error Indicators and Warnings

NE_ALLOC_FAIL

Dynamic memory allocation failed.

See Section 3.2.1.2 in How to Use the NAG Library and its Documentation for further information.

NE_BAD_PARAM

On entry, argument $\langle value \rangle$ had an illegal value.

NE_ENUM_INT_2

On entry, **side** = $\langle value \rangle$, **m** = $\langle value \rangle$, **pda** = $\langle value \rangle$.

Constraint: if **side** = Nag_LeftSide, $\mathbf{pda} \geq \max(1, \mathbf{m})$.

On entry, **side** = $\langle\text{value}\rangle$, **n** = $\langle\text{value}\rangle$, **pda** = $\langle\text{value}\rangle$.
 Constraint: if **side** = Nag_RightSide, **pda** $\geq \max(1, \mathbf{n})$.

NE_INT

On entry, **m** = $\langle\text{value}\rangle$.
 Constraint: **m** ≥ 0 .

On entry, **n** = $\langle\text{value}\rangle$.
 Constraint: **n** ≥ 0 .

NE_INT_2

On entry, **pdb** = $\langle\text{value}\rangle$, **m** = $\langle\text{value}\rangle$.
 Constraint: **pdb** $\geq \max(1, \mathbf{m})$.

On entry, **pdb** = $\langle\text{value}\rangle$ and **n** = $\langle\text{value}\rangle$.
 Constraint: **pdb** $\geq \max(1, \mathbf{n})$.

On entry, **pdc** = $\langle\text{value}\rangle$, **m** = $\langle\text{value}\rangle$.
 Constraint: **pdc** $\geq \max(1, \mathbf{m})$.

On entry, **pdc** = $\langle\text{value}\rangle$ and **n** = $\langle\text{value}\rangle$.
 Constraint: **pdc** $\geq \max(1, \mathbf{n})$.

NE_INTERNAL_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please contact NAG for assistance.

An unexpected error has been triggered by this function. Please contact NAG.

See Section 3.6.6 in How to Use the NAG Library and its Documentation for further information.

NE_NO_LICENCE

Your licence key may have expired or may not have been installed correctly.

See Section 3.6.5 in How to Use the NAG Library and its Documentation for further information.

7 Accuracy

The BLAS standard requires accurate implementations which avoid unnecessary over/underflow (see Section 2.7 of Basic Linear Algebra Subprograms Technical (BLAST) Forum (2001)).

8 Parallelism and Performance

`nag_zhemm` (f16zcc) is threaded by NAG for parallel execution in multithreaded implementations of the NAG Library.

Please consult the x06 Chapter Introduction for information on how to control and interrogate the OpenMP environment used within this function. Please also consult the Users' Note for your implementation for any additional implementation-specific information.

9 Further Comments

None.

10 Example

This example computes the matrix-matrix product

$$C = \alpha AB + \beta C$$

where

$$A = \begin{pmatrix} 1.0 + 0.0i & 1.0 + 2.0i & -2.0 + 3.0i \\ 1.0 - 2.0i & 2.0 + 0.0i & 1.0 + 2.0i \\ -2.0 - 3.0i & 1.0 - 2.0i & 3.0 + 0.0i \end{pmatrix},$$

$$B = \begin{pmatrix} 1.0 - 1.0i & 1.0 + 2.0i \\ -2.0 + 1.0i & 2.0 - 2.0i \\ 3.0 - 1.0i & -3.0 + 1.0i \end{pmatrix},$$

$$C = \begin{pmatrix} -3.5 - 0.5i & 1.5 + 2.0i \\ -4.5 + 1.5i & -2.0 + 3.5i \\ -5.5 + 3.5i & 3.0 - 1.5i \end{pmatrix},$$

$$\alpha = 1.0 + 0.0i \quad \text{and} \quad \beta = 2.0 + 0.0i.$$
