

NAG Library Function Document

nag_5pt_summary_stats (g01alc)

1 Purpose

nag_5pt_summary_stats (g01alc) calculates a five-point summary for a single sample.

2 Specification

```
#include <nag.h>
#include <nagg01.h>

void nag_5pt_summary_stats (Integer n, const double x[], double res[],
    NagError *fail)
```

3 Description

nag_5pt_summary_stats (g01alc) calculates the minimum, lower hinge, median, upper hinge and the maximum of a sample of n observations.

The data consist of a single sample of n observations denoted by x_i and let z_i , for $i = 1, 2, \dots, n$, represent the sample observations sorted into ascending order.

Let $m = \frac{n}{2}$ if n is even and $\frac{(n+1)}{2}$ if n is odd,

and $k = \frac{m}{2}$ if m is even and $\frac{(m+1)}{2}$ if m is odd.

Then we have

Minimum	= z_1 ,	
Maximum	= z_n ,	
Median	= z_m	if n is odd,
	= $\frac{z_m + z_{m+1}}{2}$	if n is even,
Lower hinge	= z_k	if m is odd,
	= $\frac{z_k + z_{k+1}}{2}$	if m is even,
Upper hinge	= z_{n-k+1}	if m is odd,
	= $\frac{z_{n-k} + z_{n-k+1}}{2}$	if m is even.

5 Arguments

1: **n** – Integer *Input*

On entry: n , number of observations in the sample.

Constraint: $n \geq 5$.

- 2: **x[n]** – const double *Input*
On entry: the sample observations, x_1, x_2, \dots, x_n .
- 3: **res[5]** – double *Output*
On exit: **res** contains the five-point summary.
res[0]
 The minimum.
res[1]
 The lower hinge.
res[2]
 The median.
res[3]
 The upper hinge.
res[4]
 The maximum.
- 4: **fail** – NagError * *Input/Output*
 The NAG error argument (see Section 2.7 in How to Use the NAG Library and its Documentation).

6 Error Indicators and Warnings

NE_ALLOC_FAIL

Dynamic memory allocation failed.

See Section 3.2.1.2 in How to Use the NAG Library and its Documentation for further information.

NE_BAD_PARAM

On entry, argument *<value>* had an illegal value.

NE_INT_ARG_LT

On entry, **n** = *<value>*.

Constraint: **n** ≥ 5 .

NE_INTERNAL_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please contact NAG for assistance.

An unexpected error has been triggered by this function. Please contact NAG.

See Section 3.6.6 in How to Use the NAG Library and its Documentation for further information.

NE_NO_LICENCE

Your licence key may have expired or may not have been installed correctly.

See Section 3.6.5 in How to Use the NAG Library and its Documentation for further information.

7 Accuracy

The computations are stable.

8 Parallelism and Performance

nag_5pt_summary_stats (g01alc) is not threaded in any implementation.

9 Further Comments

The time taken by nag_5pt_summary_stats (g01alc) is proportional to n .

10 Example

This example calculates a five-point summary for a sample of 12 observations.
