

## NAG Library Function Document

### nag\_rand\_triangular (g05spc)

## 1 Purpose

nag\_rand\_triangular (g05spc) generates a vector of pseudorandom numbers from a triangular distribution with parameters  $x_{\min}$ ,  $x_{\text{med}}$  and  $x_{\max}$ .

## 2 Specification

```
#include <nag.h>
#include <nagg05.h>
void nag_rand_triangular (Integer n, double xmin, double xmed, double xmax,
                           Integer state[], double x[], NagError *fail)
```

## 3 Description

The triangular distribution has a PDF (probability density function) that is triangular in profile. The base of the triangle ranges from  $x = x_{\min}$  to  $x = x_{\max}$  and the PDF has a maximum value of  $\frac{2}{x_{\max} - x_{\min}}$  at  $x = x_{\text{med}}$ . If  $x_{\min} = x_{\text{med}} = x_{\max}$  then  $x = x_{\text{med}}$  with probability 1; otherwise the triangular distribution has PDF:

$$f(x) = \frac{x - x_{\min}}{x_{\text{med}} - x_{\min}} \times \frac{2}{x_{\max} - x_{\min}} \quad \text{if } x_{\min} \leq x \leq x_{\text{med}},$$

$$f(x) = \frac{x_{\max} - x}{x_{\max} - x_{\text{med}}} \times \frac{2}{x_{\max} - x_{\min}} \quad \text{if } x_{\text{med}} < x \leq x_{\max},$$

$$f(x) = 0 \quad \text{otherwise.}$$

One of the initialization functions nag\_rand\_init\_repeatable (g05kfc) (for a repeatable sequence if computed sequentially) or nag\_rand\_init\_nonrepeatable (g05kgc) (for a non-repeatable sequence) must be called prior to the first call to nag\_rand\_triangular (g05spc).

## 5 Arguments

- |  |              |
|--|--------------|
| 1: <b>n</b> – Integer  | <i>Input</i> |
| <i>On entry:</i> $n$ , the number of pseudorandom numbers to be generated. |              |
| <i>Constraint:</i> $n \geq 0$ .  |              |
| 2: <b>xmin</b> – double  | <i>Input</i> |
| <i>On entry:</i> the end point $x_{\min}$ of the triangular distribution.  |              |

3:	<b>xmed</b> – double	<i>Input</i>
<i>On entry:</i> the median of the distribution $x_{\text{med}}$ (also the location of the vertex of the triangular distribution at which the PDF reaches a maximum).		
<i>Constraint:</i> $\mathbf{xmed} \geq \mathbf{xmin}$ .		
4:	<b>xmax</b> – double	<i>Input</i>
<i>On entry:</i> the end point $x_{\text{max}}$ of the triangular distribution.		
<i>Constraint:</i> $\mathbf{xmax} \geq \mathbf{xmed}$ .		
5:	<b>state</b> [dim] – Integer	<i>Communication Array</i>
<b>Note:</b> the dimension, $\text{dim}$ , of this array is dictated by the requirements of associated functions that must have been previously called. This array MUST be the same array passed as argument <b>state</b> in the previous call to nag_rand_init_repeatable (g05kfc) or nag_rand_init_nonrepeatable (g05kgc).		
<i>On entry:</i> contains information on the selected base generator and its current state.		
<i>On exit:</i> contains updated information on the state of the generator.		
6:	<b>x[n]</b> – double	<i>Output</i>
<i>On exit:</i> the $n$ pseudorandom numbers from the specified triangular distribution.		
7:	<b>fail</b> – NagError *	<i>Input/Output</i>
The NAG error argument (see Section 2.7 in How to Use the NAG Library and its Documentation).		

## 6 Error Indicators and Warnings

### NE\_ALLOC\_FAIL

Dynamic memory allocation failed.

See Section 3.2.1.2 in How to Use the NAG Library and its Documentation for further information.

### NE\_BAD\_PARAM

On entry, argument  $\langle \text{value} \rangle$  had an illegal value.

### NE\_INT

On entry,  $\mathbf{n} = \langle \text{value} \rangle$ .

Constraint:  $\mathbf{n} \geq 0$ .

### NE\_INTERNAL\_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please contact NAG for assistance.

An unexpected error has been triggered by this function. Please contact NAG.

See Section 3.6.6 in How to Use the NAG Library and its Documentation for further information.

### NE\_INVALID\_STATE

On entry, **state** vector has been corrupted or not initialized.

### NE\_NO\_LICENCE

Your licence key may have expired or may not have been installed correctly.

See Section 3.6.5 in How to Use the NAG Library and its Documentation for further information.

**NE\_REAL\_2**

On entry, **xmax** =  $\langle\text{value}\rangle$  and **xmed** =  $\langle\text{value}\rangle$ .  
 Constraint: **xmax**  $\geq$  **xmed**.

On entry, **xmed** =  $\langle\text{value}\rangle$  and **xmin** =  $\langle\text{value}\rangle$ .  
 Constraint: **xmed**  $\geq$  **xmin**.

**7 Accuracy**

Not applicable.

**8 Parallelism and Performance**

`nag_rand_triangular` (g05spc) is threaded by NAG for parallel execution in multithreaded implementations of the NAG Library.

Please consult the x06 Chapter Introduction for information on how to control and interrogate the OpenMP environment used within this function. Please also consult the Users' Note for your implementation for any additional implementation-specific information.

**9 Further Comments**

None.

**10 Example**

This example prints five pseudorandom numbers from a triangular distribution with parameters  $x_{\min} = -1.0$ ,  $x_{\text{med}} = 0.5$  and  $x_{\max} = 1.0$ , generated by a single call to `nag_rand_triangular` (g05spc), after initialization by `nag_rand_init_repeatable` (g05kfc).
