

NAG Library Function Document

nag_omp_in_parallel (x06afc)

1 Purpose

`nag_omp_in_parallel (x06afc)` returns 1 if called from within an active OpenMP parallel region, and 0 otherwise.

2 Specification

```
#include <nag.h>
#include <nagx06.h>
Integer nag_omp_in_parallel ()
```

3 Description

`nag_omp_in_parallel (x06afc)`, for multi-threaded implementations, returns 1 if called from within an active OpenMP parallel region, and 0 otherwise.

In serial implementations of the NAG C Library this function will always return 0. See the x06 Chapter Introduction for a discussion of the behaviour of these functions when called in serial.

5 Arguments

None.

6 Error Indicators and Warnings

None.

7 Accuracy

Not applicable.

8 Parallelism and Performance

`nag_omp_in_parallel (x06afc)` is not threaded in any implementation.

9 Further Comments

None.

10 Example

See Section 10 in nag_omp_get_thread_num (x06adc) for a demonstration of how to use nag_omp_in_parallel (x06afc).
