

## NAG Library Function Document

### **nag\_prob\_vavilov (g01euc)**

## 1 Purpose

nag\_prob\_vavilov (g01euc) returns the value of the Vavilov distribution function  $\Phi_V(\lambda; \kappa, \beta^2)$ .

It is intended to be used after a call to nag\_init\_vavilov (g01zuc).

## 2 Specification

```
#include <nag.h>
#include <nagg01.h>
double nag_prob_vavilov (double x, const double comm_arr[])
```

## 3 Description

nag\_prob\_vavilov (g01euc) evaluates an approximation to the Vavilov distribution function  $\Phi_V(\lambda; \kappa, \beta^2)$  given by

$$\Phi_V(\lambda; \kappa, \beta^2) = \int_{-\infty}^{\lambda} \phi_V(\lambda; \kappa, \beta^2) d\lambda,$$

where  $\phi(\lambda)$  is described in nag\_prob\_density\_vavilov (g01muc). The method used is based on Fourier expansions. Further details can be found in Schorr (1974).

## 4 References

Schorr B (1974) Programs for the Landau and the Vavilov distributions and the corresponding random numbers *Comp. Phys. Comm.* **7** 215–224

## 5 Arguments

- |   |                            |
|---|----------------------------|
| 1: <b>x</b> – double  | <i>Input</i>               |
| <i>On entry:</i> the argument $\lambda$ of the function.  |                            |
| 2: <b>comm_arr[322]</b> – const double  | <i>Communication Array</i> |
| <i>On entry:</i> this <b>must</b> be the same argument <b>comm_arr</b> as returned by a previous call to nag_init_vavilov (g01zuc). |                            |

## 6 Error Indicators and Warnings

None.

## 7 Accuracy

At least five significant digits are usually correct.

## 8 Parallelism and Performance

nag\_prob\_vavilov (g01euc) is not threaded in any implementation.

## 9 Further Comments

`nag_prob_vavilov` (`g01euc`) can be called repeatedly with different values of  $\lambda$  provided that the values of  $\kappa$  and  $\beta^2$  remain unchanged between calls. Otherwise, `nag_init_vavilov` (`g01zuc`) must be called again. This is illustrated in Section 10.

## 10 Example

This example evaluates  $\Phi_V(\lambda; \kappa, \beta^2)$  at  $\lambda = 0.1$ ,  $\kappa = 2.5$  and  $\beta^2 = 0.7$ , and prints the results.
