

# NAG Library Function Document

## nag\_tsa\_trans\_free (g13bzc)

### 1 Purpose

nag\_tsa\_trans\_free (g13bzc) frees the memory allocated by NAG functions to the transfer function model orders structure, type Nag\_TransfOrder. This structure is used by some functions in Chapter g13.

### 2 Specification

```
#include <nag.h>
#include <nagg13.h>
void nag_tsa_trans_free (Nag_TransfOrder *transfv)
```

### 3 Description

The structure Nag\_TransfOrder is used by some functions in Chapter g13. This structure is allocated memory by these functions during use.

nag\_tsa\_trans\_free (g13bzc) is supplied to allow you to easily free the allocated memory and set the associated pointers to **NULL**.

Use of nag\_tsa\_trans\_free (g13bzc) is not essential but is recommended if further calls are to be made using the structure **transf** and memory conservation is important.

### 4 References

None.

### 5 Arguments

- 1: **transfv** – Nag\_TransfOrder \* *Input/Output*  
*On entry:* the transfer function model orders structure of type Nag\_TransfOrder  
*On exit:* the pointers with NAG allocated memory will have been freed and set to **NULL**.

### 6 Error Indicators and Warnings

None.

### 7 Accuracy

Not applicable.

### 8 Parallelism and Performance

nag\_tsa\_trans\_free (g13bzc) is not threaded in any implementation.

### 9 Further Comments

None.

## 10 Example

See `nag_tsa_multi_inp_model_estim` (g13bec) and `nag_tsa_multi_inp_model_forecast` (g13bjc) for examples of how `nag_tsa_trans_free` (g13bzc) is used.
