

NAG Library Routine Document

F06GFF (ZCOPY)

Note: before using this routine, please read the Users' Note for your implementation to check the interpretation of *bold italicised* terms and other implementation-dependent details.

1 Purpose

F06GFF (ZCOPY) copies a complex vector to a complex vector.

2 Specification

```
SUBROUTINE F06GFF (N, X, INCX, Y, INCY)
```

```
INTEGER N, INCX, INCY
```

```
COMPLEX (KIND=nag_wp) X(*), Y(*)
```

The routine may be called by its BLAS name *zcopy*.

3 Description

F06GFF (ZCOPY) performs the operation

$$y \leftarrow x$$

where x and y are n -element complex vectors scattered with stride INCX and INCY respectively.

4 References

5 Parameters

1: N – INTEGER *Input*

On entry: n , the number of elements in x and y .

2: X(*) – COMPLEX (KIND=nag_wp) array *Input*

Note: the dimension of the array X must be at least $\max(1, 1 + (N - 1) \times |\text{INCX}|)$.

On entry: the n -element vector x .

If $\text{INCX} > 0$, x_i must be stored in $X(1 + (i - 1) \times \text{INCX})$, for $i = 1, 2, \dots, N$.

If $\text{INCX} < 0$, x_i must be stored in $X(1 - (N - i) \times \text{INCX})$, for $i = 1, 2, \dots, N$.

Intermediate elements of X are not referenced.

3: INCX – INTEGER *Input*

On entry: the increment in the subscripts of X between successive elements of x .

4: Y(*) – COMPLEX (KIND=nag_wp) array *Output*

Note: the dimension of the array Y must be at least $\max(1, 1 + (N - 1) \times |\text{INCY}|)$.

On exit: the vector y .

If $\text{INCY} > 0$, y_i will be stored in $Y(1 + (i - 1) \times \text{INCY})$, for $i = 1, 2, \dots, N$.

If $\text{INCY} < 0$, y_i will be stored in $Y(1 - (N - i) \times \text{INCY})$, for $i = 1, 2, \dots, N$.

Intermediate elements of Y are unchanged.

5: $\text{INCY} - \text{INTEGER}$

Input

On entry: the increment in the subscripts of Y between successive elements of y .

6 Error Indicators and Warnings

None.

7 Accuracy

Not applicable.

8 Further Comments

None.

9 Example

None.
