

## NAG Library Routine Document

### F16GHF (BLAS\_ZWAXPBY)

**Note:** before using this routine, please read the Users' Note for your implementation to check the interpretation of *bold italicised* terms and other implementation-dependent details.

#### 1 Purpose

F16GHF (BLAS\_ZWAXPBY) computes the sum of two scaled vectors, preserving input, for complex scalars and vectors.

#### 2 Specification

```
SUBROUTINE F16GHF (N, ALPHA, X, INCX, BETA, Y, INCY, W, INCW)
INTEGER                N, INCX, INCY, INCW
COMPLEX (KIND=nag_wp) ALPHA, X(1+(N-1)*ABS(INCX)), BETA,           &
                      Y(1+(N-1)*ABS(INCY)), W(1+(N-1)*ABS(INCW))
```

The routine may be called by its BLAST name *blas\_zwaxpby*.

#### 3 Description

F16GHF (BLAS\_ZWAXPBY) performs the operation

$$w \leftarrow \alpha x + \beta y,$$

where  $x$  and  $y$  are  $n$ -element complex vectors, and  $\alpha$  and  $\beta$  are complex scalars.

#### 5 Parameters

- |    |  |              |
|----|--|--------------|
| 1: | N – INTEGER  | <i>Input</i> |
|    | <i>On entry:</i> $n$ , the number of elements in $x$ , $y$ and $w$ .                         |              |
| 2: | ALPHA – COMPLEX (KIND=nag_wp)  | <i>Input</i> |
|    | <i>On entry:</i> the scalar $\alpha$ .   |              |
| 3: | X(1 + (N – 1) ×  INCX ) – COMPLEX (KIND=nag_wp) array  | <i>Input</i> |
|    | <i>On entry:</i> the $n$ -element vector $x$ .   |              |
|    | If INCX > 0, $x_i$ must be stored in X(( $i - 1$ ) ×  INCX  + 1), for $i = 1, 2, \dots, N$ . |              |
|    | If INCX < 0, $x_i$ must be stored in X((N – $i$ ) ×  INCX  – 1), for $i = 1, 2, \dots, N$ .  |              |
|    | Intermediate elements of X are not referenced.   |              |
| 4: | INCX – INTEGER   | <i>Input</i> |
|    | <i>On entry:</i> the increment in the subscripts of X between successive elements of $x$ .   |              |
|    | <i>Constraint:</i> INCX ≠ 0.   |              |

- 5: BETA – COMPLEX (KIND=nag\_wp) Input  
*On entry:* the scalar  $\beta$ .
- 6: Y(1 + (N – 1) × |INCY|) – COMPLEX (KIND=nag\_wp) array Input  
*On entry:* the  $n$ -element vector  $y$ .  
 If INCY > 0,  $y_i$  must be stored in Y(1 + (i – 1) × INCY), for  $i = 1, 2, \dots, N$ .  
 If INCY < 0,  $y_i$  must be stored in Y(1 – (N – i) × INCY), for  $i = 1, 2, \dots, N$ .  
 Intermediate elements of Y are not referenced.
- 7: INCY – INTEGER Input  
*On entry:* the increment in the subscripts of Y between successive elements of  $y$ .  
*Constraint:* INCY  $\neq$  0.
- 8: W(1 + (N – 1) × |INCW|) – COMPLEX (KIND=nag\_wp) array Output  
*On exit:* the  $n$ -element vector  $w$ .  
 If INCW > 0,  $w_i$  is in W(1 + (i – 1) × INCW), for  $i = 1, 2, \dots, N$ .  
 If INCW < 0,  $w_i$  is in W(1 + (N – i) × INCW), for  $i = 1, 2, \dots, N$ .  
 Intermediate elements of W are not referenced.
- 9: INCW – INTEGER Input  
*On entry:* the increment in the subscripts of W between successive elements of  $w$ .  
*Constraint:* INCW  $\neq$  0.

## 6 Error Indicators and Warnings

If INCX = 0 or INCY = 0 or INCW = 0, an error message is printed and program execution is terminated.

## 7 Accuracy

The BLAS standard requires accurate implementations which avoid unnecessary over/underflow (see Section 2.7 of Basic Linear Algebra Subprograms Technical (BLAST) Forum (2001)).

## 8 Parallelism and Performance

Not applicable.

## 9 Further Comments

None.

## 10 Example

This example computes the result of a scaled vector accumulation for

$$\begin{aligned} \alpha &= 3 + 2i, & x &= (-4 + 2.1i, 3.7 + 4.5i, -6 + 1.2i)^T, \\ \beta &= -i, & y &= (-3 - 2.4i, 6.4 - 5i, -5.1)^T. \end{aligned}$$
