NAG Library Routine Document

G05PDF

Note: before using this routine, please read the Users' Note for your implementation to check the interpretation of **bold italicised** terms and other implementation-dependent details.

1 Purpose

G05PDF generates a given number of terms of a type I AGARCH(p,q) process (see Engle and Ng (1993)).

2 Specification

```
SUBROUTINE GO5PDF (DIST, NUM, IP, IQ, THETA, GAMMA, DF, HT, ET, FCALL, R, LR, STATE, IFAIL)

INTEGER NUM, IP, IQ, DF, LR, STATE(*), IFAIL

REAL (KIND=nag_wp) THETA(IQ+IP+1), GAMMA, HT(NUM), ET(NUM), R(LR)

LOGICAL FCALL

CHARACTER(1) DIST
```

3 Description

A type I AGARCH(p,q) process can be represented by:

$$h_t = \alpha_0 + \sum_{i=1}^q \alpha_i (\epsilon_{t-i} + \gamma)^2 + \sum_{i=1}^p \beta_i h_{t-i}, \quad t = 1, 2, \dots, T;$$

where $\epsilon_t \mid \psi_{t-1} = N(0,h_t)$ or $\epsilon_t \mid \psi_{t-1} = S_t(df,h_t)$. Here S_t is a standardized Student's t-distribution with df degrees of freedom and variance h_t , T is the number of observations in the sequence, ϵ_t is the observed value of the GARCH(p,q) process at time t, h_t is the conditional variance at time t, and ψ_t the set of all information up to time t. Symmetric GARCH sequences are generated when γ is zero, otherwise asymmetric GARCH sequences are generated with γ specifying the amount by which positive (or negative) shocks are to be enhanced.

One of the initialization routines G05KFF (for a repeatable sequence if computed sequentially) or G05KGF (for a non-repeatable sequence) must be called prior to the first call to G05PDF.

5 Parameters

1: DIST - CHARACTER(1)

Input

On entry: the type of distribution to use for ϵ_t .

DIST = 'N'

A Normal distribution is used.

Mark 25 G05PDF.1

G05PDF NAG Library Manual

DIST = 'T'

A Student's t-distribution is used.

Constraint: DIST = 'N' or 'T'.

2: NUM - INTEGER

Input

On entry: T, the number of terms in the sequence.

Constraint: $NUM \ge 0$.

3: IP – INTEGER

Input

On entry: the number of coefficients, β_i , for i = 1, 2, ..., p.

Constraint: $IP \geq 0$.

4: IQ – INTEGER

Input

On entry: the number of coefficients, α_i , for $i = 1, 2, \dots, q$.

Constraint: $IQ \ge 1$.

5: THETA(IQ + IP + 1) - REAL (KIND=nag wp) array

Input

On entry: the first element must contain the coefficient α_o , the next IQ elements must contain the coefficients α_i , for $i=1,2,\ldots,q$. The remaining IP elements must contain the coefficients β_j , for $j=1,2,\ldots,p$.

Constraints:

$$\sum_{i=2}^{\text{IQ+IP}+1} \text{THETA}(i) < 1.0;$$

$$\text{THETA}(i) \geq 0.0, \text{ for } i = 2, 3, \dots, \text{IP} + \text{IQ} + 1.$$

6: GAMMA – REAL (KIND=nag wp)

Input

On entry: the asymmetry parameter γ for the GARCH(p,q) sequence.

7: DF – INTEGER

Input

On entry: the number of degrees of freedom for the Student's t-distribution.

If DIST = 'N', DF is not referenced.

Constraint: if DIST = 'T', DF > 2.

8: HT(NUM) - REAL (KIND=nag_wp) array

Output

On exit: the conditional variances h_t , for t = 1, 2, ..., T, for the GARCH(p, q) sequence.

9: ET(NUM) – REAL (KIND=nag_wp) array

Output

On exit: the observations ϵ_t , for t = 1, 2, ..., T, for the GARCH(p, q) sequence.

10: FCALL – LOGICAL

Input

On entry: if FCALL = .TRUE., a new sequence is to be generated, otherwise a given sequence is to be continued using the information in R.

11: R(LR) – REAL (KIND=nag wp) array

Input/Output

On entry: the array contains information required to continue a sequence if FCALL = .FALSE..

On exit: contains information that can be used in a subsequent call of G05PDF, with FCALL = .FALSE..

G05PDF.2 Mark 25

12: LR – INTEGER Input

On entry: the dimension of the array R as declared in the (sub)program from which G05PDF is called

Constraint: LR $\geq 2 \times (IP + IQ + 2)$.

13: STATE(*) – INTEGER array

Communication Array

Note: the actual argument supplied **must** be the array STATE supplied to the initialization routines G05KFF or G05KGF.

On entry: contains information on the selected base generator and its current state.

On exit: contains updated information on the state of the generator.

14: IFAIL - INTEGER

Input/Output

On entry: IFAIL must be set to 0, -1 or 1. If you are unfamiliar with this parameter you should refer to Section 3.3 in the Essential Introduction for details.

For environments where it might be inappropriate to halt program execution when an error is detected, the value -1 or 1 is recommended. If the output of error messages is undesirable, then the value 1 is recommended. Otherwise, if you are not familiar with this parameter, the recommended value is 0. When the value -1 or 1 is used it is essential to test the value of IFAIL on exit.

On exit: IFAIL = 0 unless the routine detects an error or a warning has been flagged (see Section 6).

6 Error Indicators and Warnings

If on entry IFAIL = 0 or -1, explanatory error messages are output on the current error message unit (as defined by X04AAF).

Errors or warnings detected by the routine:

```
IFAIL = 1
        On entry, DIST is not valid: DIST = \langle value \rangle.
IFAIL = 2
        On entry, NUM = \langle value \rangle.
        Constraint: NUM \ge 0.
IFAIL = 3
        On entry, IP = \langle value \rangle.
        Constraint: IP > 0.
IFAIL = 4
        On entry, IQ = \langle value \rangle.
        Constraint: IQ \ge 1.
IFAIL = 5
        On entry, THETA(\langle value \rangle) = \langle value \rangle.
        Constraint: THETA(i) \geq 0.0.
IFAIL = 7
        On entry, DF = \langle value \rangle.
        Constraint: DF > 3.
```

Mark 25 G05PDF.3

G05PDF NAG Library Manual

```
IFAIL = 11
```

IP or IQ is not the same as when R was set up in a previous call.

Previous value of $IP = \langle value \rangle$ and $IP = \langle value \rangle$.

Previous value of $IQ = \langle value \rangle$ and $IQ = \langle value \rangle$.

IFAIL = 12

On entry, LR is not large enough, LR = $\langle value \rangle$: minimum length required = $\langle value \rangle$.

IFAIL = 13

On entry, STATE vector has been corrupted or not initialized.

IFAIL = 51

On entry, sum of THETA(i), for i = 2, 3, ..., IP + IQ + 1 is ≥ 1.0 : sum = $\langle value \rangle$.

IFAIL = -99

An unexpected error has been triggered by this routine. Please contact NAG.

See Section 3.8 in the Essential Introduction for further information.

IFAIL = -399

Your licence key may have expired or may not have been installed correctly.

See Section 3.7 in the Essential Introduction for further information.

IFAIL = -999

Dynamic memory allocation failed.

See Section 3.6 in the Essential Introduction for further information.

7 Accuracy

Not applicable.

8 Parallelism and Performance

G05PDF is threaded by NAG for parallel execution in multithreaded implementations of the NAG Library.

Please consult the X06 Chapter Introduction for information on how to control and interrogate the OpenMP environment used within this routine. Please also consult the Users' Note for your implementation for any additional implementation-specific information.

9 Further Comments

None.

10 Example

This example first calls G05KFF to initialize a base generator then calls G05PDF to generate two realizations, each consisting of ten observations, from a symmetric GARCH(1,1) model.
