

## NAG Library Function Document

### **nag\_kelvin\_ber (s19aac)**

## 1 Purpose

nag\_kelvin\_ber (s19aac) returns a value for the Kelvin function ber  $x$ .

## 2 Specification

```
#include <nag.h>
#include <nags.h>
double nag_kelvin_ber (double x, NagError *fail)
```

## 3 Description

nag\_kelvin\_ber (s19aac) evaluates an approximation to the Kelvin function ber  $x$ .

**Note:**  $\text{ber}(-x) = \text{ber } x$ , so the approximation need only consider  $x \geq 0.0$ .

The function is based on several Chebyshev expansions:

For  $0 \leq x \leq 5$ ,

$$\text{ber } x = \sum_{r=0} a_r T_r(t), \quad \text{with } t = 2\left(\frac{x}{5}\right)^4 - 1.$$

For  $x > 5$ ,

$$\begin{aligned} \text{ber } x = & \frac{e^{x/\sqrt{2}}}{\sqrt{2\pi x}} \left[ \left( 1 + \frac{1}{x} a(t) \right) \cos \alpha + \frac{1}{x} b(t) \sin \alpha \right] \\ & + \frac{e^{-x/\sqrt{2}}}{\sqrt{2\pi x}} \left[ \left( 1 + \frac{1}{x} c(t) \right) \sin \beta + \frac{1}{x} d(t) \cos \beta \right], \end{aligned}$$

where  $\alpha = \frac{x}{\sqrt{2}} - \frac{\pi}{8}$ ,  $\beta = \frac{x}{\sqrt{2}} + \frac{\pi}{8}$ ,

and  $a(t)$ ,  $b(t)$ ,  $c(t)$ , and  $d(t)$  are expansions in the variable  $t = \frac{10}{x} - 1$ .

When  $x$  is sufficiently close to zero, the result is set directly to  $\text{ber } 0 = 1.0$ .

For large  $x$ , there is a danger of the result being totally inaccurate, as the error amplification factor grows in an essentially exponential manner; therefore the function must fail.

## 4 References

## 5 Arguments

1: **x** – double *Input*

*On entry:* the argument  $x$  of the function.

2: **fail** – NagError \* *Input/Output*

The NAG error argument (see Section 3.6 in the Essential Introduction).

## 6 Error Indicators and Warnings

### NE\_INTERNAL\_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please contact NAG for assistance.

### NE\_REAL\_ARG\_GT

On entry,  $x = \langle value \rangle$ .

Constraint:  $|x| \leq \langle value \rangle$ .

$|x|$  is too large for an accurate result to be returned and the function returns zero.

## 7 Accuracy

Since the function is oscillatory, the absolute error rather than the relative error is important. Let  $E$  be the absolute error in the result and  $\delta$  be the relative error in the argument. If  $\delta$  is somewhat larger than the *machine precision*, then we have:

$$E \simeq \left| \frac{x}{\sqrt{2}} (\text{ber}_1 x + \text{bei}_1 x) \right| \delta$$

(provided  $E$  is within machine bounds).

For small  $x$  the error amplification is insignificant and thus the absolute error is effectively bounded by the *machine precision*.

For medium and large  $x$ , the error behaviour is oscillatory and its amplitude grows like  $\sqrt{\frac{x}{2\pi}} e^{x/\sqrt{2}}$ .

Therefore it is not possible to calculate the function with any accuracy when  $\sqrt{xe^{x/\sqrt{2}}} > \frac{\sqrt{2\pi}}{\delta}$ . Note that this value of  $x$  is much smaller than the minimum value of  $x$  for which the function overflows.

## 8 Parallelism and Performance

Not applicable.

## 9 Further Comments

None.

## 10 Example

This example reads values of the argument  $x$  from a file, evaluates the function at each value of  $x$  and prints the results.

### 10.1 Program Text

```
/* nag_kelvin_ber (s19aac) Example Program.
*
* Copyright 1990 Numerical Algorithms Group.
*
* Mark 2 revised, 1992.
*/
#include <nag.h>
#include <stdio.h>
#include <nag_stdlib.h>
#include <nags.h>

int main(void)
{
```

```

Integer exit_status = 0;
double x, y;
NagError fail;

INIT_FAIL(fail);

/* Skip heading in data file */
scanf("%*[^\n]");
printf("nag_kelvin_ber (s19aac) Example Program Results\n");
printf("      x            y\n");
while (scanf("%lf", &x) != EOF)
{
    /* nag_kelvin_ber (s19aac).
     * Kelvin function ber x
     */
    y = nag_kelvin_ber(x, &fail);
    if (fail.code != NE_NOERROR)
    {
        printf("Error from nag_kelvin_ber (s19aac).\n%s\n",
               fail.message);
        exit_status = 1;
        goto END;
    }
    printf("%12.3e%12.3e\n", x, y);
}
END:
return exit_status;
}

```

## 10.2 Program Data

```
