

NAG Library Function Document

nag_isum (f16dlc)

1 Purpose

nag_isum (f16dlc) sums the elements of an integer vector.

2 Specification

```
#include <nag.h>
#include <nagf16.h>
Integer nag_isum (Integer n, const Integer x[], Integer incx, NagError *fail)
```

3 Description

nag_isum (f16dlc) returns the sum

$$x_1 + x_2 + \cdots + x_n$$

of the elements of an n -element integer vector x .

If $\mathbf{n} = 0$ on entry, nag_isum (f16dlc) immediately returns the value 0.

5 Arguments

- | | |
|--|---------------------|
| 1: n – Integer | <i>Input</i> |
| <i>On entry:</i> n , the number of elements in x . | |
| <i>Constraint:</i> $\mathbf{n} \geq 0$. | |
| 2: x[dim] – const Integer | <i>Input</i> |
| Note: the dimension, dim , of the array x must be at least $\max(1, 1 + (\mathbf{n} - 1) \times \mathbf{incx})$. | |
| <i>On entry:</i> the n -element vector x . | |
| If $\mathbf{incx} > 0$, x_i must be stored in $\mathbf{x}[(i - 1) \times \mathbf{incx}]$, for $i = 1, 2, \dots, \mathbf{n}$. | |
| If $\mathbf{incx} < 0$, x_i must be stored in $\mathbf{x}[(\mathbf{n} - i) \times \mathbf{incx}]$, for $i = 1, 2, \dots, \mathbf{n}$. | |
| Intermediate elements of x are not referenced. If $\mathbf{n} = 0$, x is not referenced and may be NULL . | |
| 3: incx – Integer | <i>Input</i> |
| <i>On entry:</i> the increment in the subscripts of x between successive elements of x . | |
| <i>Constraint:</i> $\mathbf{incx} \neq 0$. | |
| 4: fail – NagError * | <i>Input/Output</i> |
| The NAG error argument (see Section 3.6 in the Essential Introduction). | |

6 Error Indicators and Warnings

NE_ALLOC_FAIL

Dynamic memory allocation failed.

See Section 3.2.1.2 in the Essential Introduction for further information.

NE_BAD_PARAM

On entry, argument $\langle value \rangle$ had an illegal value.

NE_INT

On entry, **incx** = $\langle value \rangle$.

Constraint: **incx** $\neq 0$.

On entry, **n** = $\langle value \rangle$.

Constraint: **n** ≥ 0 .

NE_INTERNAL_ERROR

An unexpected error has been triggered by this function. Please contact NAG.

See Section 3.6.6 in the Essential Introduction for further information.

NE_NO_LICENCE

Your licence key may have expired or may not have been installed correctly.

See Section 3.6.5 in the Essential Introduction for further information.

7 Accuracy

The BLAS standard requires accurate implementations which avoid unnecessary over/underflow (see Section 2.7 of Basic Linear Algebra Subprograms Technical (BLAST) Forum (2001)).

8 Parallelism and Performance

Not applicable.

9 Further Comments

None.

10 Example

This example computes the sum of the elements of

$$x = (1, 10, 11, -2, 9)^T.$$

10.1 Program Text

```
/* nag_isum (f16dlc) Example Program.
*
* Copyright 2014 Numerical Algorithms Group.
*
* Mark 9, 2009.
*/
#include <stdio.h>
#include <nag.h>
#include <nag_stdlib.h>
#include <nagf16.h>

int main(void)
```

```
{
/* Scalars */
Integer exit_status, i, incx, n, sumval, xlen;
/* Arrays */
Integer *x = 0;
/* Nag Types */
NagError fail;

exit_status = 0;
INIT_FAIL(fail);

printf("nag_isum (f16dlc) Example Program Results\n\n");

/* Skip heading in data file */
#ifndef _WIN32
scanf_s("%*[^\n] ");
#else
scanf("%*[^\n] ");
#endif
/* Read the number of elements and the increment */
#ifndef _WIN32
scanf_s("%"NAG_IFMT%"NAG_IFMT"%*[^\n] ", &n, &incx);
#else
scanf("%"NAG_IFMT%"NAG_IFMT"%*[^\n] ", &n, &incx);
#endif

xlen = MAX(1, 1 + (n - 1)*ABS(incx));

if (n > 0)
{
    /* Allocate memory */
    if (!(x = NAG_ALLOC(xlen, Integer)))
    {
        printf("Allocation failure\n");
        exit_status = -1;
        goto END;
    }
}
else
{
    printf("Invalid n\n");
    exit_status = 1;
    goto END;
}

/* Input vector x */
for (i = 0; i < xlen; i = i + incx)
#ifndef _WIN32
scanf_s("%"NAG_IFMT"", &x[i]);
#else
scanf("%"NAG_IFMT"", &x[i]);
#endif
#ifndef _WIN32
