NAG Library Function Document

nag_damin_val (f16jrc)

1 Purpose

nag_damin_val (f16jrc) computes, with respect to absolute value, the smallest component of a real vector, along with the index of that component.

2 Specification

```
#include <nag.h>
#include <nagf16.h>
void nag_damin_val (Integer n, const double x[], Integer incx, Integer *k,
     double *r, NagError *fail)
```

3 Description

nag_damin_val (f16jrc) computes, with respect to absolute value, the smallest component, r, of an n-element real vector x, and determines the smallest index, k, such that

$$r = |x_k| = \min_j |x_j|.$$

5 Arguments

1: **n** – Integer *Input*

On entry: n, the number of elements in x.

Constraint: $\mathbf{n} \geq 0$.

2: **x**[dim] – const double *Input*

Note: the dimension, *dim*, of the array **x** must be at least $\max(1, 1 + (\mathbf{n} - 1) \times |\mathbf{incx}|)$.

On entry: the vector x. Element x_i is stored in $\mathbf{x}[(i-1) \times |\mathbf{incx}|]$, for $i = 1, 2, \ldots, n$.

3: **incx** – Integer *Input*

On entry: the increment in the subscripts of **x** between successive elements of x.

Constraint: $\mathbf{incx} \neq 0$.

4: **k** – Integer * *Output*

On exit: k, the index, from the set $\{0, |\mathbf{incx}|, \ldots, (\mathbf{n} - 1) \times |\mathbf{incx}|\}$, of the smallest component of x with respect to absolute value. If $\mathbf{n} = 0$ on input then **k** is returned as -1.

5: **r** – double * *Output*

On exit: r, the smallest component of x with respect to absolute value. If $\mathbf{n} = 0$ on input then **r** is returned as 0.0.

6: **fail** – NagError * *Input/Output*

The NAG error argument (see Section 3.6 in the Essential Introduction).

6 Error Indicators and Warnings

NE_ALLOC_FAIL

Dynamic memory allocation failed.
See Section 3.2.1.2 in the Essential Introduction for further information.

NE_BAD_PARAM

On entry, argument ⟨*value*⟩ had an illegal value.

NE_INT

On entry, **incx** = ⟨*value*⟩.
Constraint: **incx** $\neq 0$.

On entry, **n** = ⟨*value*⟩.
Constraint: **n** ≥ 0.

NE_INTERNAL_ERROR

An unexpected error has been triggered by this function. Please contact NAG.
See Section 3.6.6 in the Essential Introduction for further information.

NE_NO_LICENCE

Your licence key may have expired or may not have been installed correctly.
See Section 3.6.5 in the Essential Introduction for further information.

7 Accuracy

The BLAS standard requires accurate implementations which avoid unnecessary over/underflow (see Section 2.7 of Basic Linear Algebra Subprograms Technical (BLAST) Forum (2001)).

8 Parallelism and Performance

Not applicable.

9 Further Comments

None.

10 Example

This example computes the smallest component with respect to absolute value and index of that component for the vector

$$x = (1, 10, 11, -2, 9)^{\mathrm{T}}.$$
