## nag\_complex\_bessel\_j\_seq (s18gkc)

### 1 Purpose

nag\_complex\_bessel\_j\_seq (s18gkc) returns a sequence of values for the Bessel functions  $J_{\alpha+n-1}(z)$  or  $J_{\alpha-n+1}(z)$  for complex  $z$ , non-negative  $\alpha < 1$  and  $n = 1, 2, \dots, |N| + 1$ .

### 2 Specification

```
#include <nag.h>
#include <nags.h>
void nag_complex_bessel_j_seq (Complex z, double a, Integer nl, Complex b[], NagError *fail)
```

### 3 Description

nag\_complex\_bessel\_j\_seq (s18gkc) evaluates a sequence of values for the Bessel function of the first kind  $J_\alpha(z)$ , where  $z$  is complex and nonzero and  $\alpha$  is the order with  $0 \leq \alpha < 1$ . The  $(|N| + 1)$ -member sequence is generated for orders  $\alpha, \alpha + 1, \dots, \alpha + |N|$  when  $N \geq 0$ . Note that  $+$  is replaced by  $-$  when  $N < 0$ . For positive orders the function may also be called with  $z = 0$ , since  $J_q(0) = 0$  when  $q > 0$ . For negative orders the formula

$$J_{-q}(z) = \cos(\pi q)J_q(z) - \sin(\pi q)Y_q(z)$$

is used to generate the required sequence. The appropriate values of  $J_q(z)$  and  $Y_q(z)$  are obtained by calls to nag\_complex\_bessel\_y (s17dcc) and nag\_complex\_bessel\_j (s17dec).

### 5 Arguments

- |   |               |
|---|---------------|
| 1: <b>z</b> – Complex<br><i>On entry:</i> the argument $z$ of the function.<br><i>Constraint:</i> $\mathbf{z} \neq (0.0, 0.0)$ when <b>nl</b> < 0.  | <i>Input</i>  |
| 2: <b>a</b> – double<br><i>On entry:</i> the order $\alpha$ of the first member in the required sequence of function values.<br><i>Constraint:</i> $0.0 \leq \mathbf{a} < 1.0$ .  | <i>Input</i>  |
| 3: <b>nl</b> – Integer<br><i>On entry:</i> the value of $N$ .<br><i>Constraint:</i> $\text{abs}(\mathbf{nl}) \leq 101$ .  | <i>Input</i>  |
| 4: <b>b[abs(nl) + 1]</b> – Complex<br><i>On exit:</i> with <b>fail.code</b> = NE_NOERROR or NW_SOME_PRECISION_LOSS, the required sequence of function values: <b>b</b> [ $n - 1$ ] contains $J_{\alpha+n-1}(z)$ if <b>nl</b> $\geq 0$ and $J_{\alpha-n+1}(z)$ otherwise, for $n = 1, 2, \dots, \text{abs}(\mathbf{nl}) + 1$ . | <i>Output</i> |

5:     **fail** – NagError \*

*Input/Output*

The NAG error argument (see Section 3.6 in the Essential Introduction).

## 6 Error Indicators and Warnings

### **NE\_ALLOC\_FAIL**

Dynamic memory allocation failed.

See Section 3.2.1.2 in the Essential Introduction for further information.

### **NE\_BAD\_PARAM**

On entry, argument  $\langle value \rangle$  had an illegal value.

### **NE\_INT**

On entry,  $|\mathbf{nl}| = \langle value \rangle$ .

Constraint:  $|\mathbf{nl}| \leq 101$ .

On entry,  $\mathbf{nl} = \langle value \rangle$ .

Constraint: when  $\mathbf{nl} < 0$ ,  $\mathbf{z} \neq (0.0, 0.0)$ .

### **NE\_INTERNAL\_ERROR**

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please contact NAG for assistance.

An unexpected error has been triggered by this function. Please contact NAG.

See Section 3.6.6 in the Essential Introduction for further information.

### **NE\_NO\_LICENCE**

Your licence key may have expired or may not have been installed correctly.

See Section 3.6.5 in the Essential Introduction for further information.

### **NE\_OVERFLOW\_LIKELY**

Computation abandoned due to the likelihood of overflow.

### **NE\_REAL**

On entry,  $\mathbf{a} = \langle value \rangle$ .

Constraint:  $\mathbf{a} < 1.0$ .

On entry,  $\mathbf{a} = \langle value \rangle$ .

Constraint:  $\mathbf{a} \geq 0.0$ .

### **NE\_TERMINATION\_FAILURE**

Computation abandoned due to failure to satisfy the termination condition.

### **NE\_TOTAL\_PRECISION\_LOSS**

Computation abandoned due to total loss of precision.

### **NW\_SOME\_PRECISION\_LOSS**

Computation completed but some precision has been lost.

## 7 Accuracy

All constants in nag\_complex\_bessel\_y (s17dcc) and nag\_complex\_bessel\_j (s17dec) are specified to approximately 18 digits of precision. If  $t$  denotes the number of digits of precision in the floating-point arithmetic being used, then clearly the maximum number of correct digits in the results obtained is

limited by  $p = \min(t, 18)$ . Because of errors in argument reduction when computing elementary functions inside nag\_complex\_bessel\_y (s17dcc) and nag\_complex\_bessel\_j (s17dec), the actual number of correct digits is limited, in general, by  $p - s$ , where  $s \approx \max(1, |\log_{10}|z||, |\log_{10}|\alpha||)$  represents the number of digits lost due to the argument reduction. Thus the larger the values of  $|z|$  and  $|\alpha|$ , the less the precision in the result.

## 8 Parallelism and Performance

Not applicable.

## 9 Further Comments

None.

## 10 Example

This example evaluates  $J_0(z)$ ,  $J_1(z)$ ,  $J_2(z)$  and  $J_3(z)$  at  $z = 0.6 - 0.8i$ , and prints the results.
