

NAG Library Function Document

nag_tsa_diff (g13aac)

1 Purpose

nag_tsa_diff (g13aac) carries out non-seasonal and seasonal differencing on a time series. Information which allows the original series to be reconstituted from the differenced series is also produced. This information is required in time series forecasting.

2 Specification

```
#include <nag.h>
#include <naggl3.h>
void nag_tsa_diff (const double x[], Integer nx, Integer d, Integer ds,
                  Integer s, double xd[], Integer *nxd, NagError *fail)
```

3 Description

Let $\nabla^d \nabla_s^D x_i$ be the i th value of a time series x_i , for $i = 1, 2, \dots, n$ after non-seasonal differencing of order d and seasonal differencing of order D (with period or seasonality s). In general,

$$\begin{aligned} \nabla^d \nabla_s^D x_i &= \nabla^{d-1} \nabla_s^D x_{i+1} - \nabla^{d-1} \nabla_s^D x_i & d > 0 \\ \nabla^d \nabla_s^D x_i &= \nabla^d \nabla_s^{D-1} x_{i+s} - \nabla^d \nabla_s^{D-1} x_i & D > 0 \end{aligned}$$

Non-seasonal differencing up to the required order d is obtained using

$$\begin{aligned} \nabla^1 x_i &= x_{i+1} - x_i & \text{for } i = 1, 2, \dots, (n-1) \\ \nabla^2 x_i &= \nabla^1 x_{i+1} - \nabla^1 x_i & \text{for } i = 1, 2, \dots, (n-2) \\ &\vdots \\ \nabla^d x_i &= \nabla^{d-1} x_{i+1} - \nabla^{d-1} x_i & \text{for } i = 1, 2, \dots, (n-d) \end{aligned}$$

Seasonal differencing up to the required order D is then obtained using

$$\begin{aligned} \nabla^d \nabla_s^1 x_i &= \nabla^d x_{i+s} - \nabla^d x_i & \text{for } i = 1, 2, \dots, (n-d-s) \\ \nabla^d \nabla_s^2 x_i &= \nabla^d \nabla_s^1 x_{i+s} - \nabla^d \nabla_s^1 x_i & \text{for } i = 1, 2, \dots, (n-d-2s) \\ &\vdots \\ \nabla^d \nabla_s^D x_i &= \nabla^d \nabla_s^{D-1} x_{i+s} - \nabla^d \nabla_s^{D-1} x_i & \text{for } i = 1, 2, \dots, (n-d-D \times s) \end{aligned}$$

Mathematically, the sequence in which the differencing operations are performed does not affect the final resulting series of $m = n - d - D \times s$ values.

4 References

None.

5 Arguments

- 1: $\mathbf{x}[\mathbf{nx}]$ – const double *Input*
On entry: the undifferenced time series, x_i , for $i = 1, 2, \dots, n$.

- 2: **nx** – Integer *Input*
On entry: n , the number of values in the undifferenced time series.
Constraint: $\mathbf{nx} > \mathbf{d} + (\mathbf{ds} \times \mathbf{s})$.
- 3: **d** – Integer *Input*
On entry: d , the order of non-seasonal differencing.
Constraint: $\mathbf{d} \geq 0$.
- 4: **ds** – Integer *Input*
On entry: D , the order of seasonal differencing.
Constraint: $\mathbf{ds} \geq 0$.
- 5: **s** – Integer *Input*
On entry: s , the seasonality.
Constraints:
 if $\mathbf{ds} > 0$, $\mathbf{s} > 0$;
 if $\mathbf{ds} = 0$, $\mathbf{s} \geq 0$.
- 6: **xd[nx]** – double *Output*
On exit: the differenced values in elements 0 to $\mathbf{nxd} - 1$, and reconstitution data in the remainder of the array.
- 7: **nxd** – Integer * *Output*
On exit: the number of differenced values in the array **xd**.
- 8: **fail** – NagError * *Input/Output*
 The NAG error argument (see Section 2.7 in How to Use the NAG Library and its Documentation).

6 Error Indicators and Warnings

NE_ALLOC_FAIL

Dynamic memory allocation failed.

See Section 2.3.1.2 in How to Use the NAG Library and its Documentation for further information.

NE_BAD_PARAM

On entry, argument $\langle value \rangle$ had an illegal value.

NE_INT

On entry, $\mathbf{d} = \langle value \rangle$.

Constraint: $\mathbf{d} \geq 0$.

On entry, $\mathbf{ds} = \langle value \rangle$.

Constraint: $\mathbf{ds} \geq 0$.

On entry, $\mathbf{s} = \langle value \rangle$.

Constraint: $\mathbf{s} \geq 0$.

NE_INT_2

On entry, **ds** = *⟨value⟩*.
 Constraint: if **s** = 0, **ds** ≤ 0.

NE_INT_4

On entry, **nx** = *⟨value⟩*, **d** = *⟨value⟩*, **ds** = *⟨value⟩* and **s** = *⟨value⟩*.
 Constraint: **nx** > **d** + (**ds** × **s**).

NE_INTERNAL_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please contact NAG for assistance.

An unexpected error has been triggered by this function. Please contact NAG.
 See Section 2.7.6 in How to Use the NAG Library and its Documentation for further information.

NE_NO_LICENCE

Your licence key may have expired or may not have been installed correctly.
 See Section 2.7.5 in How to Use the NAG Library and its Documentation for further information.

7 Accuracy

The computations are believed to be stable.

8 Parallelism and Performance

nag_tsa_diff (g13aac) is not threaded in any implementation.

9 Further Comments

The time taken by nag_tsa_diff (g13aac) is approximately proportional to $(\mathbf{d} + \mathbf{ds}) \times \mathbf{nx}$.

10 Example

This example reads in a set of data consisting of 20 observations from a time series. Non-seasonal differencing of order 2 and seasonal differencing of order 1 (with seasonality of 4) are applied to the input data, giving an output array holding 14 differenced values and 6 values which can be used to reconstitute the output array.
