

NAG Library Routine Document

G01ETF

Note: before using this routine, please read the Users' Note for your implementation to check the interpretation of *bold italicised* terms and other implementation-dependent details.

1 Purpose

G01ETF returns the value of the Landau distribution function $\Phi(\lambda)$, via the routine name.

2 Specification

```
FUNCTION G01ETF (X)
REAL (KIND=nag_wp) G01ETF
REAL (KIND=nag_wp) X
```

3 Description

G01ETF evaluates an approximation to the Landau distribution function $\Phi(\lambda)$ given by

$$\Phi(\lambda) = \int_{-\infty}^{\lambda} \phi(\lambda) d\lambda,$$

where $\phi(\lambda)$ is described in G01MTF, using piecewise approximation by rational functions. Further details can be found in Kílbig and Schorr (1984).

4 References

Kílbig K S and Schorr B (1984) A program package for the Landau distribution *Comp. Phys. Comm.* **31** 97–111

5 Arguments

1: X – REAL (KIND=nag_wp) *Input*
On entry: the argument λ of the function.

6 Error Indicators and Warnings

None.

7 Accuracy

At least 7 significant digits are usually correct, but occasionally only 6. Such accuracy is normally considered to be adequate for applications in experimental physics.

Because of the asymptotic behaviour of $\Phi(\lambda)$, which is of the order of $\exp[-\exp(-\lambda)]$, underflow may occur on some machines when λ is moderately large and negative.

8 Parallelism and Performance

G01ETF is not threaded in any implementation.

9 Further Comments

None.

10 Example

This example evaluates $\Phi(\lambda)$ at $\lambda = 0.5$, and prints the results.

10.1 Program Text

```

Program g01etfe
